'Application No.: Not Yet Assigned Docket No.: A8319.0009/P009-A

AMENDMENTS TO THE CLAIMS

1-8. (Cancelled)

- 9. (Currently Amended) The cured product according to claim [[8]] <u>14</u> wherein the dielectric loss tangent after curing is not more than 0.002.
- 10. (Original) A curable film which contains a crosslinking component having a weight average molecular weight of not more than 1,000 and a plurality of styrene groups and represented by the formula [1]

$$\begin{bmatrix} & & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & &$$

wherein R is a hydrocarbon skeleton which may have a substituent, R¹ is hydrogen, methyl or ethyl, m is an integer of 1-4 and n is an integer of 2 or more, and further contains a high polymer having film-forming ability.

- 11. (Original) The curable film according to claim 10 wherein a conductor layer has been formed on at least one surface of the curable film.
- 12. (Currently Amended) An electrical part having an insulator layer wherein the insulator layer contains a cured product of a low dielectric loss tangent resin

Application No.: Not Yet Assigned

composition which contains a crosslinking component having a weight average molecular weight of not more than 1,000 and a plurality of styrene groups and represented by the formula [1]

Docket No.: A8319.0009/P009-A

$$\begin{bmatrix} & & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & &$$

wherein R is a hydrocarbon skeleton which may have a substituent, R¹ is hydrogen, methyl or ethyl, m is an integer of 1-4 and n is an integer of 2 or more, and further contains at least one member selected from a high plolymer polymer having a weight average molecular weight of not less than 5,000 and a filler.

13. (Original) A method for producing an electrical part having an insulator layer wherein the insulator layer is a curable film containing a low dielectric loss tangent resin composition which contains a crosslinking component having a weight average molecular weight of not more than 1,000 and a plurality of styrene groups and represented by the formula [1]

$$\begin{bmatrix} & & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & \\ & & & \\ & &$$

4

wherein R is a hydrocarbon skeleton which may have a substituent, R¹ is hydrogen, methyl or ethyl, m is an integer of 1-4 and n is an integer of 2 or more, and further contains a high

polymer having film-forming ability, and the curable film is lamination-bonded onto a

Docket No.: A8319.0009/P009-A

conductor layer.

14. (New) A cured product obtained by curing a low dielectric loss tangent resin composition, wherein said low dielectric loss tangent resin composition contains a crosslinking component having a weight average molecular weight of not more than 1,000 and a plurality of styrene groups and represented by the formula [1]

$$\begin{bmatrix} & & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & \\ & & & \\ & &$$

wherein R is a hydrocarbon skeleton which may have a substituent, R¹ is hydrogen, methyl or ethyl, m is an integer of 1-4 and n is an integer of 2 or more, and wherein said low dielectric loss tangent resin composition further contains at least one member selected from a high polymer having a weight average molecular weight of not less than 5,000 and a filler.
